

SETTING UP QUADRANTS IN A BOOK

1. Go to the last page of the book where you will read. Write down the page number.
2. Go to the first page of the book where you will start reading. If there's a prologue, include it! Write down that page number. It isn't always page 1!
3. Subtract the first page from the last page. This is the total number of pages you'll read in your book.
4. Now divide the total number by 4. This tells you how many pages in a quadrant.
5. Add your answer in #4 to the first page in your book. Go to that page, then go to the closest chapter. Mark the new page. This is the beginning of quadrant 2.
6. Add the answer to #4 to the page you marked in #5. Go to the nearest chapter. This is the beginning of Quadrant 3.
7. Repeat to find the beginning of Quadrant 4.
